How to judge the progress of energy storage industry in China?

Chen Haisheng, Chairman of the China Energy Storage Alliance: When judging the progress of an industry, we must take a rational view that considers the overall situation, development, and long-term perspective. In regard to the overall situation, the development of energy storage in China is still proceeding at a fast pace.

Is energy storage economically feasible?

Since none of the reviewed storage is economically feasible, the energy price modification required to achieve feasibility are estimated. Based on such results, the distance between the current situation and the one favourable to storage is assessed. In this way, the future outlook of each storage technology is discussed. 1.
