What are lithium-ion batteries?

Lithium-ion batteries are a disruptive technology that will significantly alter a variety of industry sectors including consumer electronics, energy, oil & gas and transportation - maritime included.

What is a large lithium ion battery?

Note that this UN regulation is the only mandatory set of regulation for lithium-ion batteries today (12-2013). Further the UN rules defines a large battery to have a gross mass of more than 12 kg and a large cell as a cell with a gross mass of more than 500 g.

Are lithium ion batteries safe?

Compared to traditional batteries with water based electrolytes such as lead acid and nickel cadmium batteries, lithium-ion batteries can store between two and eight times more energy per weight unit. The high energy density as well as the use of a flammable electrolyte makes a safe design more challenging.

Are lithium batteries allowed on a DNV GL vessel?

DNV Class published tentative rules for using Lithium batteries on-board vessels in 2012. These rules were updated and published in October 2015 under the common rule set of DNV GL. The requirements are function-based and applicable for all DNV GL classed vessels having batteries larger than 50 kWh.

What is the self-discharge rate of a lithium-ion battery?

Each lithium-ion battery cell will have its own individual self-discharge rate. The self-discharge rate is determined by the properties and purity of materials used in the cell. The level of contamination in the electrolyte and electrodes is particularly important. The self-discharge rate will depend on temperature and battery cell age.
