What is a Vacuum Contactor? A vacuum contactor is an electrical switching device used to control the switching of electrical circuits. It contacts inside a sealed "vacuum interrupter" called a vacuum bottle. This sealed environment in which the switching takes place allows for a fast, clean "make/break" action of the contacts.

Vacuum starters are offered in three classifications. They are NEMA rated devices up to 600 Vac, Special Purpose rated devices up to 1500 Vac and Mining rated devices rated up to 1500 Vac. Each device is tested to different standards to serve their market. Typical applications include full voltage control of three-phase squirrel cage motors, primary control of low-voltage wound rotor ...
