Additionally, proactive aggression has been shown to be a stronger predictor of later criminality and substance use in children compared to reactive aggression (e.g., Brendgen et al. 2001).

Why is aggressive behavior a product of predisposing factors?

Like other social behaviors, aggressive behavior is always a product of predisposing personal factors and precipitating situational factors. The predisposing factors exert their influence by creating encoded social cognitions including schemas about the world, scripts for social behavior, and normative beliefs about what is appropriate.

Does aggressive behavior predict adverse outcomes?

Aggression is predictive of adverse outcomes for the (a) enactor (e.g., violent recidivism), (b) those affiliated with the enactor (e.g., child abuse), (c) victims of aggressive behavior (e.g., mortality), (d) witnesses of aggressive behavior (e.g., posttraumatic stress disorder), and (e) society in general.

A meta-analysis of 98 separate studies, testing whether there is a relation between violent and prosocial video game play and aggressive and prosocial behavior. The results showed a modest positive relation between violent game play and aggression-related outcomes and a modest negative relation between violent game play and prosocial outcomes.

Across three studies (N = 1388), we validated the factor structure of the FFABS, obtained partial scalar

measurement invariance for males and females, and demonstrated consistent patterns with theoretically related stable constructs and with behavioral measures of inhibitory control and aggressive behaviors, establishing convergent and ...

In a context in which aggressive behavior has been predominantly predicted by self-reports, this paper considers how a theoretical and empirical examination of automatic and ...

Although aggressive behavior has been the focus of considerable scholarly attention, the role of emotion regulation in aggressive behavior has been considered little beyond assessing the impact of under-controlled anger on aggression (Davey, Day, & Howells, 2005). This is unsurprising, given the well-established link between anger and aggression (Howells, 1998, ...
