

What is Vietnam's energy mix in 2023?

An analysis was conducted on Vietnam's energy mix in 2023, including the examination of power plant capacities and the volume of energy production from fossil sources (coal, gas, oil) and renewable sources (hydropower, solar energy, wind energy, biomass energy).

Can Vietnam transition from coal to green energy?

Government investment and green energy investment funds such as JETP are strategically directed towards renewable energy sources, including solar, wind, biomass, hydrogen energy, and efficient energy storage technologies. Consequently, this research substantiates the viability of an energy transition from coal to green energy in Vietnam.

What is the Vietnam energy development plan VIII?

The Vietnam Energy Development Plan VIII aims to increase the share of solar energy in renewable sources to 25% within eight years. This initiative also intends to reduce reliance on imported coal energy, thereby providing greater opportunities for the country's solar energy market.

Why is energy transition important in Vietnam?

Vietnam emphasizes that its energy transition must uphold justice and the rights of all citizens. Beyond climate goals, a just energy transition is also a catalyst for achieving the sustainable development Goals (SDGs). The transformation of energy systems has created new jobs and increased access to clean and modern energy . 6.3.

Will Vietnam build a better energy future?

Building a cheaper, cleaner, and more secure energy future for Vietnam will not happen overnight. Other markets further along in development of renewable power greatly benefited from the support of the government.

What is Vietnam's energy plan?

Vietnam has released a long-anticipated energy plan meant to take the country through the next decade and help meet soaring demand while reducing carbon emissions. (AP Photo/Hau Dinh) A person rests on a table at a shopping mall to take refuge from the heat during a power outage in Hanoi, Vietnam on Saturday, June 10, 2023.

Energy landscapes in Asia and other regions are currently undergoing a transformation aimed at increasing the share of clean energy sources. This article analyzes and forecasts the electricity demand in Vietnam, examining existing constraints that necessitate the shift from coal to renewable energy sources. The rapid economic growth in Vietnam is driving a ...
