

Why is Cabo Verde a good place for wind power?

The Cabo Verde archipelago is one of the best sites for wind power generation since it is located in the northeast trade winds belt. Wind power was first deployed here in 1994. The government set a target to generate 50% of its energy from renewable energy sources by 2020 and ultimately, 100%. This was due to:

How will the Electra project support the government of Cabo Verde?

Finally, the project will support the Government of Cabo Verde's goal to mobilize private and public capital for energy sector investments, by increasing stakeholders' capacity and supporting the restructuring and privatization of the electricity utility ELECTRA.

Does Cape Verde have electricity?

Cape Verde has but one electricity company (Electra) and Cape Verde has one of the highest electricity prices in the world. Furthermore, the electric system is inefficient and registers energy losses of around 30%.

Will Cabo Verde privatize Electra?

" The project will build on recent efforts from the World Bank to support the Government of Cabo Verde in the privatization of the electricity utility ELECTRA. A first step has been taken with the enactment of the power sector reform decree law, supported by the Cabo Verde First Equitable and Sustainable Recovery Development Policy Financing.

Does Cabo Verde have a photovoltaic power plant?

Excess energy produced in the photovoltaic power plant is used by fishermen for refrigeration purposes. Monte Trigo is the only 100% green village in Cabo Verde. The diesel generator previously used has barely been used since the completion of the project in 2012.

Can desalination and energy systems be used in Cape Verde?

Integrating desalination and energy systems like this could be highly beneficial. For example, on the island of S. Vicente it could enable wind turbines to meet up to 84% of the island's electricity demand. Like many African countries, Cape Verde's tropical location has good potential for solar photovoltaic (PV) electricity.
