What is a stored energy mechanism (SEM)?

A Stored Energy Mechanism (SEM) is a mechanism that opens and closes a device (Switch) by compressing and releasing spring energy. The operating handle compresses a set of closing springs and a separate set of opening springs. These springs store the mechanical energy of this movement and are held in the compressed state by close and open latches.

Does machine on/off control reduce energy consumption?

Energy-efficient scheduling (EES) with machine on/off control, as a system-level approach, decreases overall energy consumption by turning off non-bottleneck machines when they are idle (Zhang and Chiong, 2016), and has been studied by an increasing number of researchers in recent decades.

Is preventive maintenance necessary for machines in a real production scheduling environment?

Therefore, it is necessary to consider preventive maintenance (PM) for machines in a real production scheduling environment.

How to calculate energy consumption caused by restarting Machine  $i$  once?

energy consumption caused by restarting machine  $i$  once (in Watts) From Rule 1, we know that  $P_{Si} > S_{ik} > P_{Ri}$ . Hence,  $E - E^* > 0$ , i.e.,  $E^* < E$  is always satisfied. As shown in Fig. A.1, we choose a machine with a maintenance-operation block ( $b_{ikm}$ ) and some operations as an example.

Can a battery be charged during maintenance?

During maintenance, the battery cannot be charged or discharged. The time of occurrence of the main utility grid outage,  $T_{out}$ , is sampled from an exponential distribution with rate  $\lambda_{grid} = 5.71 \times 10^{-5} \text{ hour}^{-1}$ , which has been set according to .

How is the energy required by Shiftable loads distributed?

The energy required by the shiftable loads,  $L_{sDtiTLs}$ , is distributed according to the uniform distribution  $U_{1.10 \sim 5.50 \text{ kWh}}$  and the corresponding time available to satisfy the request,  $T_{Ls}$ , is sampled from an exponential distribution with rate  $\lambda_{TLs}$  equal to  $0.05 \text{ hour}^{-1}$ .
