What are the different types of mechanical storage systems?

Three forms of mechanical storage systems are elaborated here. Among them, the pumped hydro storage and compressed air energy storage systems store potential energy, whereas flywheel energy storage system stores kinetic energy. 3.1.1. Pumped Hydro Storage (PHS)

What is the complexity of the energy storage review?

The complexity of the review is based on the analysis of 250+ Information resources. Various types of energy storage systems are included in the review. Technical solutions are associated with process challenges, such as the integration of energy storage systems. Various application domains are considered.

Hydrogen stored at 700 bar in Type III or Type IV vessel may provide a practical solution with refueling time less than 3 min and driving 500 km [10]. At 700 bar with Type IV vessel, hydrogen has energy density of 5.7 MJ/L [7]. However, onboard pressurized vessels have less public acceptance [4] and have increased risks of explosions due to sudden possible shocks.
