Do you have the Right Foundation for your energy storage project?

When it comes to energy storage projects, having the right foundation involves careful planning upfront. But each site is different, requiring careful consideration for details like the types of equipment being supported, site location and geologic factors.

What are cement-based structural supercapacitors (CSSC)?

Cement-based structural supercapacitors (CSSC) are a novel energy storage component that combines electrical energy storage with structural load-bearing capabilities, offering the potential to replace traditional building components and enabling large-scale energy storage at the building level.

What is a functional cement-based battery?

The functional cement-based battery multitasks as a sustainable structural component and as an energy storage medium for buildings. Short carbon fibers are added to a cement-based mixture to increase conductivity and flexural toughness.

Can cement be used for energy storage in supercapacitors?

In recent years, cement has undergone a transition within the realm of battery energy storage, evolving from its original function as an electrode additive to an electrolyte enhancer, and subsequently, it has been increasingly employed for energy storage in supercapacitors.

Should building elements be replaced with energy storage systems (SSCs)?

One suggestion is to replace some traditional building elements with SSC that serve both as structural supports and energy storage devices [41,47]. SSCs are typically made from modified building materials, with cement (including portland, magnesium phosphate and high belite cement), brick, and geopolymers serving as key components.

Why is cement used in construction?

As the primary ingredient in concrete, cement is widely used in the energy-intensive construction industry. The ease of availability, low cost, and ability to bear mechanical loads make it widely utilized. Additionally, the porous and insulating structure of cement slurry provides numerous channels for ion migration [44,45].
