It is strongly recommended that energy storage systems be far more rigorously analyzed in terms of their full life-cycle impact. For example, the health and environmental impacts of compressed air and pumped hydro energy storage at the grid-scale are almost trivial compared to batteries, thus these solutions are to be encouraged whenever appropriate.

The global energy market is in turmoil. Volatility in oil prices, mounting energy security fears and the looming catastrophe of climate change show that our current energy system poses grave threats to our way of life, at ...
