

Who is Yulong Ding?

Engineer Yulong Ding works on energy-storage technologies. Yulong Ding, director of the University of Birmingham's Centre for Energy Storage, UK, explains how Chinese companies are keen to work with international teams to develop new technologies. What led you to focus on energy storage?

How many energy storage projects are there in China?

In 2016, our centre established a joint energy-storage research laboratory with the Beijing-based State Grid Corporation of China, which operates the country's electricity network. We now have six completed research projects related to energy conversion and storage. A seventh, secured during lockdown, is in progress.

Does China support energy storage technology research and development?

It is entirely consistent with the fact that the Chinese government and enterprises have increased their support for energy storage technology research and development during China's 12th Five-Year Plan and 13th Five-Year Plan period. 2.2.

What is the energy storage model in Shandong province?

In February 2022, it officially became the first independent energy storage power station in Shandong province to pass the market registration. The energy storage ancillary service profit is 200 $\text{\$/kWh}$, and the lease fee is 330 $\text{\$/kWh}$, and the priority power generation incentive is 16 million $\text{\$/year}$. 3.6. Shared energy storage model

How is energy storage developing in China?

However, China's energy storage is developing rapidly. The government requires that some new units must be equipped with energy storage systems. The concept of shared energy storage has been applied in China, which effectively promotes the development of energy storage. 4.3. Explore new models of energy storage development

How is Yulong Ding collaborating with teams in China?

Yulong Ding explains how he is collaborating with teams in China to improve energy technologies. Engineer Yulong Ding works on energy-storage technologies. Yulong Ding, director of the University of Birmingham's Centre for Energy Storage, UK, explains how Chinese companies are keen to work with international teams to develop new technologies.

A paper titled "Information Authoritarianism vs. Information Anarchy: A Comparison of Information Ecosystems in Mainland China and Hong Kong during the Early Stage of the COVID-19 Pandemic", co-authored by Dr. Ding Chunyan and Dr. Lin Fen, was published with China Review in February 2021.

Recently, rapidly increased demands of integration and miniaturization continuously challenge energy densities of dielectric capacitors. New materials with high recoverable energy storage densities become highly desirable. Here, by structure evolution between fluorite HfO₂ and perovskite hafnate, we create an amorphous hafnium-based oxide ...

Energy storage systems can relieve the pressure of electricity consumption during peak hours. Energy storage provides a more reliable power supply and energy savings ...

Zn metal batteries (ZMBs) have been regarded as one of the promising candidates for large-scale energy storage devices, because of its low cost, desirable chemical inertness in air, excellent specific capacity (820 mA h g⁻¹), and the low potential (-0.76 V vs. SHE) of Zn metal [1]. Water-based electrolytes are usually employed in ZMBs for their merits of desirable ...

The development of diverse electrochemical energy storage technologies has emerged as a pressing imperative to address the demands of modern industrial growth and socioeconomic progress [1, 2]. Among the available viable alternatives, aqueous Zn-ion batteries (AZIBs) have demonstrated notable merits, including their high safety, affordable cost, low ...
