The equation for the rotational kinetic energy is of the same form of the above except it is slightly different. It is: $E = \frac{1}{2} I \omega^2$ where I is the moment of Inertia given by $I = mr^2$ where m is the mass and r is the radius. ω is the angular velocity given by $\omega = v/r$ where v is the rotational velocity and r is the radius about which the object is rotating.. This is just a simplified explanation ...
