

What are energy storage and aggregate systems?

As our electricity system transitions to a net zero system, energy storage and aggregate systems play an increasingly important role to firm up the expanding volume of renewable energy. From 9 August 2023, participants in the NEM have the option to participate in ADC for units within a generating system (Aggregate System).

What is an aggregate system (ADC)?

ADC allows the units in an Aggregate System to conform in aggregate with their dispatch instructions, subject to an AEMO requirement for individual conformance or Resource Level Compliance (RLC). Accordingly, ADC provides the Aggregate System with the flexibility to manage its electricity flows behind the connection point.
