

Why are oil and gas companies pouring billions into EV charging?

What's the real reason oil and gas companies are pouring billions into electric vehicle charging? Oil companies are pouring huge sums into the EV charging industry--and their interest in public charging goes far beyond installing a few chargers at their gas stations.

Are oil companies buying EV charging companies?

Oil companies are pouring huge sums into the EV charging industry--and their interest in public charging goes far beyond installing a few chargers at their gas stations. Oil majors including bp, Shell and Total have been buying up companies at all points along the charging value chain, from equipment manufacturers to ne

What is a complete energy station?

Unlike a regular gas station, a complete energy station can not only refill but also charge and replenish a vehicle. 74 hydrogen refueling stations, 1212 charging stations, 83 exchanging stations, and 1048 distributed photovoltaic power producing stations are now operational.

Do gas stations need a major electrical overhaul?

Existing infrastructure at most current station locations will require a major electrical overhaul to support ultra-high-speed EV charging. Unless the gas station is along a major freeway corridor, it's probably limited in its ability to access the high-powered electrical lines necessary to offer ultrafast charging.

What's required for ultrahigh-speed EV charging at gas stations?

Existing infrastructure at most current station locations will require a major electrical overhaul to support ultrahigh-speed EV charging. Unless the gas station is along a major freeway corridor, it's probably limited in its ability to access the high-powered electrical lines necessary to offer ultrafast charging.

How can a gas station become a fast-charging EV station?

The easiest way to transition a gas station to a fast-charging EV station is to test the waters by replacing one fuel dispenser with an EV charging dispenser, causing the least disruption possible. To attract EV drivers, gas stations must offer ultrafast charging technology, faster than L3.
