Why do EVs need to be charged?

When electricity demand and price are not up to the desired expectations, the ESS can be charged, so EVs can give more power from the energy storage system without affecting the grid and at a flat amount [10, 11]. Flywheel and battery hybrid energy storage.

Why do EVs need fast charging stations?

Design and implementation of large quantity of EVs, rapid fast charging station will help to ease range, charging issues on longer intercity drives without necessitating the purchase of extremely expensive EVs with big batteries [3,4]. Because electric vehicle has high-efficiency, low-emission transportation system.

Why is energy storage important?

So, energy storage makes the power system more stable by compensating the fluctuation occurring in power system network in very less time interval, and it makes the Indian grid more resilient, efficient, and secure for all devices connected to it [8,9].
