No wonder sailors call Bouvet the world's most remote island; no wonder writers and science fiction movie-makers keep using it in their storylines. Other stories from the AGU meeting you might like:

Expedition. Because of its location, weather researchers have long thought it a great place to put a weather tower. On 2 April 1964, the Royal Navy's Antarctic ice vessel HMS Protector was sent to the island to investigate a new area of the land created by lava flow ten years prior to the expedition. Lieutenant Commander Allan Crawford and his team landed ...

Bouvet Island is a remote, uninhabited island in the South Atlantic and is considered the most isolated island in the world. It is a dependent territory of Norway and covers an area of around 49 square kilometers. This land mass is just over 6 times the size of the island of Wangerooze. The total length of the coastline is 30 km.

The island is named after Jean-Baptiste Charles Bouvet de Lozier who first spotted it in January 1739. He was on the hunt for a large southern land mass and assumed Bouvet Island was part of it. At the time he was unable to navigate around it, so was unaware that it was an island. He named it Cap de la Circoncision.

Bouvet Islandball is a dependency of Norwayball is the most remote island in the world, located somewhere in between South Africaball and Antarcticaball ing permanently covered in ice, its clay is uninhabited and is only home to seals and a weather station.
