What are supercapacitors?

Supercapacitors are power energy storage devices with higher energy density. Compared with batteries, it has higher power density and is a new type of power energy storage device. It has the characteristics of short charging time, long service life, good temperature characteristics and green environmental protection.

Energy Storage in Capacitors (contd.) $\frac{1}{2} C V^2$ It shows that the energy stored within a capacitor is proportional to the product of its capacitance and the squared value of the voltage across the capacitor. o Recall that we also can determine the stored energy from the fields within the dielectric: $\frac{1}{2} \epsilon_0 \epsilon_r E^2 \text{ volume}$ d H 1 (). () $\epsilon^2 \dots$
