

What is the source of energy in a door lock?

The obvious source of energy is the motion of the door. If sufficient energy from one open and close sequence of the door could be captured, the energy required by the lock itself could be replaced such that the system was sustainable with little or no energy taken from the battery.

How does a door lock system work?

A small hinge-mounted electromechanical generator is used to convert the rotational motion of the door into electrical energy. The output voltage of the generator is increased to that required by the door lock system with a custom DC-DC converter. The electrical output energy of the DC-DC converter is stored in a supercapacitor for use by the lock.

What is a panic lock & release element?

The lock and release element are developed and manufactured in coordination with one another. With panic systems in particular, it is important to perceive the door as a system, because it's not only the panic lock, door lock and fitting that have to interact perfectly so that the door can help in a life-threatening situation.

What are emergency exit locks?

Emergency exit locks in accordance with DIN EN 179 for buildings or building sections not open to the general public and all areas where access by the general public can be excluded. Side entrances or doors in these buildings or building sections are only used by authorized persons.

How do panic locks work?

Panic locks activated mechanically by means of a horizontal handle or push-bar. Emergency exit locks operated mechanically by means of a handle or impact plate. Users have no advance knowledge of how to open the escape door. Users have advance knowledge of how to open the escape door.

How does a card swipe electronic door lock work?

The act of a human opening a door can be employed as a means of generating electricity that can be captured and stored for use by electronic devices. In the application presented here, the energy required to operate a card-swipe electronic door lock is obtained from the motion of the door itself.
