Does a power grid need more inertia?

A grid with slower generators needs more inertia to maintain reliability than a grid that can respond quickly. Using power electronics and inverter-based resources like wind, solar, and storage can quickly detect frequency deviations and respond to system imbalances.

Do battery energy storage systems improve stability in low-inertia grids?

As inverter-based resources like wind turbines increase, grid inertia and stability decrease. Optimal placement and control of energy storage systems can stabilise low-inertia grids. This paper investigates how optimal battery energy storage systems (BESS) enhance stability in low-inertia grids after sudden generation loss.

What is power system inertia?
