

What is a low-altitude economy?

By the 2010s, the concept of a so-called low-altitude economy (LAE) began to take shape, with companies like Uber Elevate and Lilium envisioning a future of urban /regional air transportation for both passengers and goods (Xie et al., 2016; Xiong et al., 2024; Huang et al., 2024).

Can unmanned aerial vehicles be used in low-altitude airspace?

Advances in unmanned aerial vehicle (UAV) technology, particularly for military, commercial, and consumer applications, marked the beginning of a new era in the potential for low-altitude airspace usage (Stücker et al., 2017; Wandelt et al., 2023).

How can affluent and low-income communities benefit from drone technology?

Financial incentives like subsidies, grants, and tax breaks can play a critical role in supporting underserved businesses and individuals. Investments in drone infrastructure, digital connectivity, and balanced service deployment are essential to prevent disparities between affluent and low-income areas.

How can ICAO and other countries contribute to the success of LAE?

From an international perspective, the collaborative agreements developed by both the International Civil Aviation Organization (ICAO) and individual nations have a positive effect on the success of LAE (D'Amato et al., 2018; Aposporis, 2024). In summary, coordination is essential for the successful integration of UAVs into LAE.

Can small aircraft operate in urban environments?

Innovations in electric propulsion, battery storage, and vertical takeoff and landing (VTOL) technology further accelerated this vision, making it feasible to develop small, nimble aircraft capable of operating in urban environments (Xu et al., 2020; Fan et al., 2020; Khan et al., 2022).

How can UAVs improve operational efficiency?

Such interfaces could incorporate advancements in augmented reality and large language models to enhance situational awareness and operational efficiency (Wandelt et al., 2024c; Liu, 2024; Geske et al., 2024). Supporting collaborative autonomy - where UAVs can work alongside humans in shared tasks - represents another area for policy focus.

Barcelona, Spain, 26 February 2024 - ZTE Corporation (0763.HK / 000063.SZ), a global leading provider of information and communication technology solutions, in partnership with China Telecom, today has released a 5G-Advanced ...

The development potential of low-altitude economy is huge. Its rise is injecting new vitality into multiple industries such as transportation logistics, cultural tourism, etc. Energy ...

The low-altitude economy (LAE) is an emerging vision for integrating unmanned aerial vehicles (UAV) into logistics, mobility, and communication networks. ... For example, renewable energy production and storage equipment are developed to implement best charging strategies (Lv et al., 2021a; Murshed et al., 2024). Advanced infrastructure is ...

A fuel cell powered unmanned aerial vehicle for low altitude surveillance missions. Author links open overlay panel N. Lapeña-Rey a, J.A. Blanco a, E. Ferreyra a, J.L. Lemus a, S. Pereira ... Although the system capability has been scaled up in various other power and energy storage configurations including a 3 kW/10 kWh at system level for ...

As a global leading lipo battery manufacturer, Grepow offers advanced semi-solid state batteries with an energy density of up to 350 Wh/kg, specially designed to meet the demands of low-altitude economy applications. These cutting-edge power solutions are ideal for UAVs, eVTOLs, and hybrid aircraft, delivering unmatched energy efficiency and ...

plementation of low-altitude economy strategic planning and policy measures. 2 The Connotation Concept of Low-altitude Economy 2.1 Definition Low-altitude economy is a concept proposed in China to address the development of general aviation, which is related to general aviation but cannot be simply understood

Low-altitude economy is a very popular topic in recent years, and the depth of the development of low-altitude economy will be further expanded in the future. This paper discusses one of the ...

On November 18th, the 2024 Greater Bay Area Science Forum gathered experts and scholars to exchange ideas on cutting-edge topics, including the low-altitude economy, ocean science, ...

In the 2024 Government Work Report, it was mentioned to “accelerate the development of cutting-edge emerging industries such as hydrogen energy, new materials, and innovative pharmaceuticals, actively ...

LOW-ALTITUDE economy (LAE), centered on low-altitude airspace, serves as a burgeoning and comprehensive economic form of future economic activities, carrying out various low-altitude flight activities below 1000 meters in altitude [1], [2]. LAE integrates advanced technologies such as unmanned aerial vehicles, satellite communica-

Press Release. SINEXCEL a global pioneer in modular energy storage, EV charging and power quality solutions, unveils the World's First Grid-Forming Energy Storage System (ESS) for Low-Altitude Logistics Station with Shenzhen Qihay, a prominent technology firm specialising in intelligent vehicles and low-altitude economy.. This milestone validates the feasibility of grid ...

From the above, it is clear that hydrogen fuel cells and low-altitude economics are increasingly becoming focal points of global attention. Hydrogen fuel cells, with their superior energy density, are emerging as a solution to address the shortcomings of lithium battery-powered UAVs and promote decarbonisation in the

aviation industry.

plethora of low-altitude applications in transportation, tourism, agriculture and emergency services boosts the burgeoning of low-altitude economy (LAE) [1]. In LAE, the interaction between the unmanned aerial vehicles (UAVs) and the base stations (BSs) is critical. On one hand, the UAVs need to communicate with the BSs for data transmission ...

Low-altitude transportation is not only a critical link in the exploitation of low-altitude airspace but also the central artery of the low-altitude economy. In recent years, the rapid development of general aviation and unmanned aerial vehicle (UAV) industries has resulted in extensive applications of UAVs in logistics, photography, military ...

A drone carrying seafood takes off from Nan"ao Shuangyong Pier in Shenzhen, South China"s Guangdong province, Feb 5, 2024. [Photo/Xinhua] BEIJING - Numerous Chinese provinces have mapped out ...

SF Express and SVOLT"s "low-altitude energy storage pods" expanded drone delivery ranges by 58% in rural Sichuan, earning national recognition. 5. The Road Ahead: Opportunities & Risks

China"s low-altitude aviation economy is poised to become a trillion-yuan industry in 2025 -- if safety and security challenges can be overcome.

Workers assemble doors for new energy vehicles at the Dayun New Energy Vehicle Production Base in Yuncheng, Shanxi province, on Jan 25, 2024. ... The low-altitude economy, driven by cutting-edge ...

In 2024, the low-altitude economy, as a representative of strategic emerging industries, was written into the government work report for the first time, becoming an important engine for the development of new-quality productive ...

The second step is to reduce the electrolyte completely. This is the stage of full-solid-state products that Talent New Energy will initially apply in some specialized fields, such as low-altitude economy. The third step is to reduce the negative electrode, leaving only the active material that directly generates energy.

Emerging consumer electronics fields: AR/VR, portable energy storage, electric two-wheeled vehicles, and low-altitude economic growth potential. Wearable devices: In 2024Q1, global wearable devices shipped 113 million units, an increase of 8.8% year-on-year. IDC expects wearable device shipments to grow at a rate of 10.5% in 2024 and a CAGR of ...

Introduction. Low-altitude economy (LAE) refers to a comprehensive economic form in which civil manned and unmanned aircraft are used as carriers to drive the integration and development of related fields, generally <1,000 meters in vertical height.. The low-altitude economy lies in integrating aircraft with diverse industries and expanding its application ...

First, we should develop new productivity according to local conditions, grasp the technological transformation and digital transformation projects of 10000 enterprises in the province, accelerate the transformation and upgrading of traditional industries, and promote integrated circuits, new energy storage, low-altitude Economy, biomedicine ...

The development potential of low-altitude economy is huge. Its rise is injecting new vitality into multiple industries such as transportation logistics, cultural tourism, etc. Energy storage technology innovation and infrastructure construction are of great significance to promoting China's economic development.

This milestone validates the feasibility of grid-forming energy storage in low-altitude logistics, setting a new benchmark for integrating next-generation power systems with ...

**Introduction to Low-altitude Economy.** Low-altitude airspace typically refers to the airspace within 1,000 meters from the ground, and it may extend to 3,000 meters based on different regional characteristics and actual needs. Low-altitude airspace has gradually transformed from a natural resource into an economic resource.

In recent years, Feixi County has fostered the cluster development of emerging industries including new energy and intelligent connected vehicles, integrated circuits, advanced photovoltaic and energy storage, biomedicine, low-altitude economy, etc. to inject momentum into the county's high-quality economic development. (Photo by Xu Yong/Xinhua)

Following new energy vehicles and energy storage, the low-altitude economy has become a new hotspot for battery companies. Recently, a drop test of the Xiaopeng Huitian flying car's power battery pack was successfully conducted at the China Automotive Research Center (Guangzhou) Co., Ltd. During the test, the high-capacity power battery pack ...

With eVTOLs (electric vertical takeoff and landing aircraft) stealing the spotlight at events like China's Spring Festival Gala and a flurry of government initiatives, 2024 is being ...

The low-altitude economy in China has flourished in recent years, with an increase in drone manufacturers and expanded applications. The Civil Aviation Administration of China ...

In this study, UAVs-based low-altitude economy (LAE) has been comprehensively reviewed with lifecycle techno-economic-environmental analysis, including various UAV types (like nano-miniature-small scales, wings and rotors), designs (like solar-powered ultralight, battery-powered and fuel cell-powered UAVs) and advanced controls.

The low-altitude economy (LAE) is an emerging vision for integrating unmanned aerial vehicles (UAV) into logistics, mobility, and communication networks. Driven by rapid advancements in ...
