Guided by the initiative of "Reaching carbon peak in 2030 and carbon neutrality in 2060" proposed by President Xi Jinping in a key period of global energy transformations, Energy Storage Sci-Tech Innovation Team is targeted at addressing major scientific issues in energy storage, major research tasks and large-scale sci-tech infrastructure, as well as making a ...

Dielectric materials find wide usages in microelectronics, power electronics, power grids, medical devices, and the military. Due to the vast demand, the development of advanced dielectrics with high energy storage capability has received extensive attention [1], [2], [3], [4].Tantalum and aluminum-based electrolytic capacitors, ceramic capacitors, and film ...

Energy Storage Materials is an international multidisciplinary journal for communicating scientific and technological advances in the field of materials and their devices for advanced energy storage and relevant energy conversion (such as in metal-O₂ battery). It publishes comprehensive research articles including full papers and short communications, as well as topical feature ...

However, the scope of existing reviews is often constrained, typically concentrating on specific materials such as MXenes [8], carbon-based materials or conductive materials or electrodes [9, 10], or on particular energy storage devices like Li-ion batteries or supercapacitors [11, 12]. A broader review that encompasses a diverse range of novel ...

Thermal energy storage (TES) is widely recognized as a means to integrate renewable energies into the electricity production mix on the generation side, but its applicability to the demand side is also possible [20], [21] recent decades, TES systems have demonstrated a capability to shift electrical loads from high-peak to off-peak hours, so they have the potential ...
