

What is included in the installation and operation manual?

This Installation and Operation Manual contains important information, safety guidelines, detailed planning, and setup information for installation, as well as information about configuring, operating, and troubleshooting. Read this manual carefully before using this product or operating its system.

What are the components of energy storage system?

The energy storage system consists of a bidirectional power converter PCS, a battery system, an energy management system EMS, and other equipment, as shown in Figure 2-1 below. When the system is discharging, DC power from the lithium batteries is converted into AC power by the PCS.

Who is required to install and operate energy storage systems?

Personnel installing and/or operating the energy storage system **MUST BE** qualified electricians or those who have received professional training. Failure to follow the instructions in this manual and other relevant safety procedures could result in **DEATH** or **SERIOUS INJURY**. Installing electrical equipment and energy storage systems.

How to install energy storage system?

The energy storage system must be installed on a structure supported by a concrete foundation or channel steel with a surface made of flame-resistant materials. The foundation must be smooth, solid, safe, reliable, and have sufficient load-bearing capacity. The foundation surface must not be sunken or inclined.

Why should I choose a CPS ES series energy storage system?

Thank you for choosing a CPS ES Series Energy Storage System. These are high performance and highly reliable products specifically designed for the North American solar market. The instructions in this user manual will help you solve most installation and operation difficulties.

What are energy storage systems used for?

The energy storage systems can be used to provide PV energy shifting and TOU optimization, peak shaving with demand-charge management, active and reactive power control for grid support service, zero-export control, backup power, and other system solutions to improve energy utilization efficiency and power quality.

operation, troubleshooting and decommissioning of the product as well as the operation of the product user interface. Observe all documentation that accompanies the product, keep them in a convenient place and available at all times. Illustrations in this document are reduced to the essential information and may deviate

This product is a battery energy storage system. The product names mentioned below are all described in the "attery Energy Storage System". This document will be adjusted as appropriate for product upgrades or other reasons. Unless otherwise agreed, this document is used only as a guideline, and all declaration, information

With its ultra-large capacity in the ampere-hour range, it is specifically developed for the 4-8 hour long-duration energy storage market. By using 2Cell 1175Ah, the energy storage system integration efficiency increases by 35%, significantly simplifying system integration complexity, and reducing the overall cost of the DC side energy storage system by 25%.
