

How will the Isle of Man generate electricity?

Plans to generate about 75% of the Isle of Man's electricity through solar and on-shore wind projects have been backed by the Council of Ministers. Manx Utilities (MU) will look to install solar panels on public car parks and government buildings. Wind turbines could also be built on public land to create 30MW of electricity by 2026.

Will the Isle of Man decarbonise its energy supply?

Space on roofs and car parks at the locations would be used to host solar panels, with further sites due to be revealed at a later date, which collectively would be expected to generate 10 megawatts of energy within the next three years. The Isle of Man government has a commitment to decarbonising the island's electricity supply by 2030.

How much electricity does the Isle of Man need?

While average electricity demand on the Isle of Man stands at 40MW, it can peak at 75MW during the winter and drop at night during summer to 25MW. MU chairman Tim Johnston said "detailed work" to determine the best approach to increase renewable energy was underway.

Could a wind farm be halted on the Isle of Man?

A bid to halt government plans for an onshore wind farm in the south of the Isle of Man has been thrown out. Manx Utilities (MU) is investigating a site at Earystane and Scard, which if approved by planners could produce 20 megawatts of energy by the end of 2026.

Could a CAIR vie windfarm produce 149gwh of electricity?

But Manx Utilities has published an estimate of 64% for the potential load factor at its proposed Cair Vie windfarm at Earystane. It says a 26.4MW windfarm there could produce a potential yield of 149GWh of renewable electricity per year- enough to supply more than a third of current electricity demand in the Isle of Man.

Is onshore wind a good investment for the Isle of Man?

Mr Crookall said all work to date had "shown publicly-own onshore wind represents the best value to Isle of Man electricity consumers by a reasonable margin". He said the scheme would help to "maintain affordable electricity without reliance on other markets or fossil fuels".
