

Estimated energy storage field size in 2027

How did energy storage grow in 2022 & 2023?

The US utility-scale storage sector saw tremendous growth over 2022 and 2023. The volume of energy storage installations in the United States in 2022 totaled 11,976 megawatt hours (MWh)--a figure surpassed in the first three quarters of 2023 when installations hit 13,518 MWh by cumulative volume.

How many mw did the US storage market add in Q3 2023?

In the third quarter of 2023, and despite significant delays in the market, the US storage market added a record-setting 2,354 MW and 7,322 MWh.

Which countries have the largest energy storage capacity by 2030?

Regions with the largest expected growth in energy storage capacity by 2030 include Latin America (+1,374%), the Middle East (+1,147%), and the Asia-Pacific (+778%), based on data from Wood Mackenzie's Global Energy Storage Market Update Q2, 2024.

Will energy storage capacity double by 2030?

United States forecasts that consider state goals, utility integrated resource plans (IRPs), and industry expectations estimate energy storage capacity will more than double by 2030, much of which is expected to be contributed to BESS deployments.

How will energy storage affect global electricity demand?

Energy storage will play a significant role in maintaining the balance between supply and demand as global electricity demand more than doubles by mid-century. This growth in demand will be primarily met by renewable sources like wind and solar.

What is the energy storage & distributed generation roadmap?

EPRI's Energy Storage and Distributed Generation Program uses this Roadmap as a planning guide for strategizing the direction and alignment of its BESS collaborations and applied research priorities to foster the needs of its Members and EPRI's mission of "advancing safe, reliable, affordable, and clean energy for society."
