The storage duration of a battery is determined by its power capacity and usable energy capacity. For example, a battery with 1MW of power capacity and 6MWh of usable energy capacity will have a storage duration of six hours.

What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

When is electricity purchased and stored in a BESS?

Electricity can be purchased and stored when prices are cheap in a Battery Energy Storage System (BESS) to optimise energy usage, lower costs, improve sustainability or reduce costs.
