

What is Elisa's distributed energy storage solution?

Elisa to accelerate Distributed Energy Storage solution - Europe's largest distributed virtual power plant in the making in Finland. If you'd like to hear more about Elisa's Distributed Energy Storage solution, leave your contact details here and someone from the team will be in touch shortly.

Why is distributed energy storage important?

"It is critical for society that we have an energy supply that is affordable, secure and sustainable, and the potential for distributed energy storage of telecom networks to contribute to this is huge," said Jukka-Pekka Salmenkaita, Vice President of AI and Special Projects at Elisa.

What is a Fingrid AFRR (automatic frequency restoration reserve)?

As a result, in the summer, Elisa received the technical pre-qualification acceptance from Fingrid (Finland's TSO) for its Distributed Energy Storage solution to provide balancing services in a specific balancing market, the "automatic frequency restoration reserve", or 'aFRR'.

What percentage of Finland's Electricity is generated by wind turbines?

In 2022, 14.1% of Finland's electricity was generated by wind turbines with a collective capacity of almost 5.7 GW (+76%). That capacity is expected to increase to almost 9 GW by 2025.

Figure 1 Range of services offered by energy service providers Source: Adapted from Edison Energy, 2016; Eneco, 2019 Renewable energy and energy storage system Microgrids set-ups Installation and financing of appliances and assets Monitor Automated control Retrofitting with energy efficiency devices Optimise Operations without burdening the customer

Sustainable Energy Solutions Sweden Holding (SENS) has doubled the capacity of the battery energy storage system (BESS) that forms part of its hybrid energy project located at Pyhäsalmi mine in Finland. The BESS capacity was 85 MW and is now 170 MW.

By creating a virtual power plant using additional network storage capacity, the AI-powered DES system can load-shift to allow participants to purchase electricity from the grid during low-cost periods and use stored ...

Swedish flexible assets developer and optimizer Ingrid Capacity has joined hands with SEB Nordic Energy's portfolio company Locus Energy to develop what is claimed to be Finland's largest and one of the Nordics' largest ...

Cell site energy storage plus smart controllers powered by AI could see operators reduce their own energy costs and sell stored energy back to the grid, Finnish operator says in new white paper. Mobile operators are often ...

Consumers helping to balance out fluctuations in the Finnish electricity grid - and getting rewarded for taking part. Elisa's smart home energy storage service works as part of Elisa's DES solution, the distributed virtual power plant used in Elisa's mobile network base stations, which uses AI to optimise the purchase of electricity.

support distributed energy, remove barriers, and provide a favorable environment for distributed energy to continue to grow. In parallel with policy evolution, there is an emerging new generation of use cases for distributed energy in China. Most of the barriers discussed in this paper will remain during the period 2020-25.

Using the solution, operators can utilise DES assets across their radio access networks (RAN) to participate in electricity markets and optimise their own energy consumption. Doing so could halve operators' electricity costs while helping the integration of renewable energy in the wider market, Elisa said. Elisa announced in February 2023 that it would be rolling out ...

Elisa uses the DES system to effectively turn its radio access network into a distributed virtual power plant (VPP) using installed batteries. This allows it to optimise the energy procurement of its thousands of base stations ...

Some of Finland's funding has gone towards other energy storage technologies such as pumped hydro energy storage and battery storage co-located with wind. Elisa, a telecommunications company in Finland, is using some of the funding ...

Elisa's Distributed Energy Storage solution enables a distributed virtual power plant (VPP) solution to be deployed using the Radio Access Network. This is built on an AI/ML software engine that adjusts each battery ...

Should the national power grid become temporarily overburdened, the amount of grid electricity consumed by Lidl's distribution center can be reduced by putting the battery storage to use. "During periods of very cold weather, Finland's grid can experience peak loads," explained Simo Siitonen, Energy Management Manager at Lidl Finland.

In addition, telecom operator Elisa also plans to install a 150MWh battery energy storage system at its site, which will further promote the development of the Finnish energy storage market. However, Sweden is more ...

A 10 MWh battery energy storage system (BESS) is online in Finland, with a high domestic content of hardware and software from Finnish company Cactus ... "Smart electricity storage and distributed energy production are key factors in the transition towards a more flexible and efficient energy system," says Tero

Ojanperä of Rando Grid ...

Elisa runs the radio access network (RAN) in Finland. Image: Elisa. Europe's telecommunications sector has the potential to deploy 15GWh of distributed energy storage (DES), halving its energy costs and helping the ...

Europe's telecommunications sector has the potential to deploy 15GWh of distributed energy storage (DES), halving its energy costs and helping the energy transition, Finnish telecoms firm Elisa said discussing its new DES ...

"Last summer we conducted testing with Fingrid (Finland's electricity transmission systems operator) across 200 of our base stations. It was successful and as a result, in the summer of 2022, we received the technical ...

The DES solution also enables the batteries' stored energy to be aggregated into a virtual power plant, accessing the Nordic grids' frequency regulation ancillary services markets which have become an attractive ...

Finnish telecommunications and digital services provider Elisa has been granted EUR3,9 million (\$4.1 million) from the Finnish Government to roll out their Distributed Energy Storage (DES) solution with an extended capacity of ...

Conventionally, power plants have been large, centralized units A new trend is developing toward distributed energy generation, which means that energy conversion units are situated close to energy consumers, and large units are substituted by smaller ones [1] the ultimate case, distributed energy generation means that single buildings can be completely ...

Telecoms firm Elisa Corporation has signed a contract to bring its distributed energy storage (DES) solution to Finnish mobile networks. The deal, with Helsinki-based cellular infrastructure construction and maintenance ...

Elisa to roll out Europe's largest distributed virtual power plant. Telecoms company Elisa will use a EUR3.9m grant from the Finnish government to deploy a "Distributed Energy Storage" solution across its network.

Telenor's Finnish subsidiary, DNA, announced that its tower infrastructure division, DNA Tower Finland, responsible for building and maintaining mobile network infrastructure in Finland, has...

In Finland, following a trial in the summer of 2022 of 200 base Elisa stations across the country Elisa received the technical pre-qualification acceptance from Fingrid (Finland's Transmission System Operator or TSO) for ...

The heat recovered from the distribution centre's refrigeration equipment and systems will be used for the

building's energy needs and supplied to J&#228;rvenp&#228;&#228;'s residents, heating water for approximately 500 private homes. ...

DNA Tower Finland, a company building and maintaining the mobile network infrastructure in Finland, is to join Elisa in using its Distributed Energy Storage (DES) solution. DES enables operators to optimize their electricity costs using ...

Suomessa mobiiliverkkoinfrastruktuuria rakentava ja yll&#228;pit&#228;v&#228;; DNA Tower Finland alkaa hy&#246;dynt&#228;&#228;; Elisan hajautettua s&#228;hk&#246;nvarastointiratkaisua (Distributed Energy Storage, DES). DES ...

Fluence Energy, a U.S.-based company, has introduced its latest grid-scale battery energy storage system (BESS) called Smartstack. This innovative platform offers 7.5 MWh of ...

Helen Oy, a Finnish energy company, recently chose MAN Energy Solutions to supply an air-to-water heat pump as part of Helen Oy's Patola heating plant complex in Helsinki (Figure 1).

A partnership with Finnish energy giant Fortum will harness the center's excess heat and feed it into the district heating system. Finland's most common heating method, district heating produces heat close to where it's ...

Finland is bringing on substantial amounts of wind capacity to decarbonise its energy sector. Image: CWP Renewables via Twitter. Huge wind power deployments and the limitations of the existing fleet of pumped hydro energy storage (PHES) are driving the battery storage market in Finland, a local system integrator said.

The distribution center's microgrid will work with a battery energy storage system. The storage will play an important role in equalizing consumption spikes and ensuring continuous power distribution.
