are a non-incendive type with thermistors to limit the shell temperature while Explosion proof motors will contain an internal explosion and prevent the flame from escaping. ATEX Markings Ex d is Cat.2 flameproof i.e not sparking but a spark induced internal flame cannot escape from the motor.

Although both types of ventilation fans perform the same role - introducing clean, healthy air into indoor settings - explosion proof and non explosion proof units differ in several key ways. Firstly, explosion proof fans are designed to route all voltage into the floor as a way to prevent the possibility of sparking in volatile environments.

The EX 3-phase fans can be controlled by reducing voltage via 5-step speed regulator. The EX 1-phase fans are not voltage controllable. If a controllable EX 1-phase fan is needed, the corresponding EX 3-phase fan must be used in combination with a pre-programmed frequency converter (#474200).
