How long can you keep ice in a cooler?

Only open the cooler or container when you need ice or any items inside. Limiting how often you open the cooler helps keep the ice from melting. A bucket can work in a pinch, but it's not as insulating as a cooler. Depending on the size and material of your cooler, your ice can stay frozen for up to 8 hours.

How do you keep ice from melting?

Use a plastic cooler or container instead of a metal one, when possible. Metal transfers energy faster, so it melts your ice quickly. Only open the cooler or container when you need ice or any items inside. Limiting how often you open the cooler helps keep the ice from melting. A bucket can work in a pinch, but it's not as insulating as a cooler.
