The average EV returns 3 to 4 miles per kWh. Once you've determined the electricity costs, the next step involves factoring in the kilowatt-hours of electricity your EV uses. You can reduce the cost of charging your EV at home by consulting your utility company and choosing a rate plan that suits your situation.

#### How do you calculate battery capacity cost per kWh?

For example: battery capacity cost per kWh = (cost of battery + installation cost + discounted maintainance costs and financing costs if a loan is used to purchase the battery) normalized to a capacity of 1 kWh. Levelized cost of storage (LCOS) quantifies the discounted cost per unit of released energy that was recovered from the storage device.

### Are battery energy storage systems worth the cost?
