How do you charge a battery?

Batteries can be charged in two different ways: parallel or serial. Parallel charging is when each battery is connected to its own charger. This is the most efficient way to charge batteries, as each battery charges at its own rate.

Can a solar charge controller charge two separate batteries?

Yes, charging two separate batteries using a solar panel is relatively easy. Many solar charge controllers can only recharge one battery at a time. However, a few charge controllers currently offer a choice of getting two battery banks by default. The twin banks are charged separately using the same controller and solar panels.
