How do you charge an electric bike battery?

To charge your electric bike battery, plug the charger into an outlet. If the outlet is close to a sink, toilet, or shower, use an extension cord. In case of rain, cover the battery with a plastic bag or tarpaulin before charging.

What charge level should you store your e-bike battery at?

Storing your battery without a charge is another way to wear down the cells prematurely. You need to store your e-bike's battery with at least a 50% charge if it's long-term, say 3-6 months. This will ensure there are no surprises when you take out your e-bike again in the spring or summer.

How long does it take to charge an e-bike battery?

The charging time for e-bike batteries depends on their age and capacity. A newer battery will charge quickly, while an older one may take longer because it holds less energy. Typically, it takes around 3-6 hours to charge an e-bike battery from empty to full.

Why does an older e-bike battery take longer to charge?

A much older electric bike battery will take longer to charge because it holds less energy. They'll charge when low but stop charging when the battery is full.

How should I store an e-bike?

To store your e-bike safely, keep the battery with at least a 50% charge. This is especially important for long-term storage of 3-6 months. Storing the battery without a charge can wear down the cells prematurely. Read this article to learn more about storing an e-bike.

How often should you charge your e-bike?

Even if you don't ride your e-bike often, it's a good idea to give your battery a full charge once every 2-3 weeks. This helps maintain the battery's health and performance.
