Can hydrogen storage reduce the weight of a fuel cell system?

Intense research on reducing the weight of the fuel cell system is carried out all over the world (Agnolucci 2007). Hydrogen storage methods in the transportation sector have a full potential to replace the existing battery technologies. Efficiency decreases with each step involved in energy conversion.

Why should we invest in hydrogen & fuel cells?

Regions and cities can benefit from investing in hydrogen and fuel cells not only in environmental terms, but also by providing a reliable and efficient supply of green energy to stimulate local economic growth, which is why a broad range of applications of hydrogen and fuel cells are ready to be deployed for all energy and transport sectors.
