

Can the Democratic Republic of the Congo produce lithium-ion battery cathode precursor materials?

London and Kinshasa, November 24, 2021 - The Democratic Republic of the Congo (DRC) can leverage its abundant cobalt resources and hydroelectric power to become a low-cost and low-emissions producer of lithium-ion battery cathode precursor materials.

How does the Democratic Republic of the Congo support the economy?

In the AC, Democratic Republic of the Congo supports an economy six-times larger than today's with only 35% more energy by diversifying its energy mix away from one that is 95% dependent on bioenergy.

Could the Congo become an electricity exporter?

Almost all electricity generation today comes from hydropower and the Inga project has the potential to provide much more. If network constraints are addressed, Democratic Republic of the Congo could become an electricity exporter.

Is cobalt causing a power struggle in Congo?

More than 100 interviews and thousands of pages of documents show that the race for cobalt has set off a power struggle in Congo, a storehouse of these increasingly prized resources, and lured foreigners intent on dominating the next epoch in global energy.

Why is Congo a major producer of cobalt?

Further industrial development depends on a large increase in imports. Democratic Republic of the Congo is a major producer of minerals. It accounts for almost two-thirds of global cobalt production; this gives it a crucial role in global clean energy transitions.

Did Chinese ownership lead to a decline in safety in Congo?

Separately, at least a dozen employees or contractors at the mine told The Times that Chinese ownership had led to a drastic decline in safety and an increase in injuries, many of which were not reported to management. Two Congolese safety officers said workers were assaulted after they raised concerns and were offered bribes to cover up accidents.
