Can thermal energy storage be used in building integrated photovoltaics (BIPV)?

Thermal energy storage has been also implemented in building integrated photovoltaics (BIPV), in fact Norton et al., 2011 stated that storage, PCM in this case, can be used for thermal management of these systems.

Why do we need integrated energy storage systems?

Integrated designs are required in active systems such as renewable energy facilities (i.e. photovoltaic, solar thermal) or energy efficiency HVAC systems. Many studies have been focused on improving the efficiency of these technologies by incorporating thermal energy storage systems that implies an additional storage volume .
