How to install a battery inverter?

Place the battery on the base, and then tighten the fixing screws on both sides. Install the second battery in the same way. After the installation is complete, install the wall fixing bracket. The installation method of the inverter is the same as that of the battery. **DANGER!**

Does the Manual contain all the information of the energy storage system?

The manual does not contain all the information of the energy storage system. Please read this manual carefully and follow all safety precautions seriously before any moving, installation, operation and maintenance to ensure correct use and high performance of operation on the machine.

What type of inverter/charger does the energy storage system use?

The Energy Storage System uses a MultiPlus or Quattro bidirectional inverter/charger as its main component. Note that ESS can only be installed on VE.Bus model Multis and Quattros which feature the 2nd generation microprocessor (26 or 27). All new VE.Bus Inverter/Chargers currently shipping have 2nd generation chips.

How does the inverter communication interface work?

The inverter communication interface connects the 485-2 and the 485-1 interface of the battery. If multiple energy storage battery modules are used in parallel, the address of the energy storage battery module needs to be set. The address is set to 1~4, and the address of each module cannot be repeated.

How to store a batch of inverters?

• Storage temperature should always be between -25 °C and + 60 °C, storage relative humidity is less than 90%. • If you need to store a batch of inverters, the maximum number of layers in the original carton is 4. Before opening the inverter package, please check the outer packaging for damage.

How does a grid tie inverter work?

When using a grid-tie inverter, it is connected to the AC output as well. When grid power is available, the battery will be charged with power from both the grid and the PV. Loads are powered from PV when that power source is available. Feed-in is optional and can be enabled or disabled depending on local regulations.
