

Will we build a new pumped storage hydropower facility?

We've not built a new Pumped Storage Hydropower (PSH) facility in nearly 50 years, but with over 10GW and 200GWh of shovel-ready projects, the Hydropower sector stands ready to deliver.

What is pumped storage?

Pumped storage is a type of energy storage. When demand is low (or supply is high), pumped-storage hydropower plants pump water from a lower reservoir to an upper reservoir. Later, when electricity demand is high (or supply is low), the water is released from the upper reservoir through a turbine into the lower reservoir, generating electricity.

Why is China building pumped-storage hydropower facilities?

China is building pumped-storage hydropower facilities to increase the flexibility of the power grid and accommodate growing wind and solar power. As of May 2023, China had 50 gigawatts (GW) of operational pumped-storage capacity, 30% of global capacity and more than any other country.

How big is China's pumped-storage capacity?

China's pumped-storage capacity is set to increase even more, with 89 GW of capacity currently under construction. Developers are seeking governmental approvals, land rights, or financing for an additional 276 GW of pumped-storage projects, according to the data from Global Energy Monitor. Pumped storage is a type of energy storage.

What is pumped storage hydropower (PSH)?

Pumped Storage Hydropower (PSH) is the largest form of renewable energy storage, with nearly 200 GW installed capacity providing more than 90% of all long duration energy storage across the world with over 400 projects in operation. The guidance note delivers recommendations to reduce risks and enhance certainty in project development and delivery.

Are pumped storage plans ramping up?

Pumped storage plans are ramping up. IWP&DC gives an insight into key developments across Australia, Canada, Greece, India, the UK, and the US. Recent developments in pumped storage hydropower. (Credit: Nareeta Martin on Unsplash)

On May 14, 1968, the first PSPS in China was put into operation in Gangnan, Pingshan County, Hebei Province. It is a mixed PSPS. There is a pumped storage unit with the installed capacity of 11 MW. This PSPS uses Gangnan reservoir as the upper reservoir with the total storage capacity of 1.571 × 10<sup>9</sup> m<sup>3</sup>, and uses the daily regulation pond in eastern Gangnan as the lower ...

Investment interest in new pumped-storage stations remains high as demonstrated by a total of 50 licensing applications submitted, in 2024, to RAAEY, the ...

Elsewhere in Scotland, Drax is developing a £500M pumped storage hydro-electric scheme Cruachan 2, which will be a new 600MW capacity plant constructed next to Drax's existing 440MW facility beneath Ben Cruachan in ...

SSE's pumped storage plans for Sloy join those for a new pumped hydro storage scheme at Coire Glas between Fort William and Inverness, a potential £1.5bn-plus investment in what could be Britain's ...

This paper identifies the factors affecting the construction costs of pumped storage power plants, analyzes the impact of internal and external conditions on the investment costs ...

A new guide aimed at reducing investment risks in pumped storage hydropower (PSH) projects was released today. The guide, titled "Enabling New Pumped Storage Hydropower: A guidance note for decision makers to de-risk ...

Called the Lewis Ridge Long-Duration Energy Storage Project, the new pumped storage facility will be located in Bell County in the southeast corner of Kentucky. The project comes under the wing of ...

There is over 5GW of pumped storage hydro projects in the UK pipeline which will inject billions into the economy and create over 15,000 new jobs." Statkraft already has a number of pumped storage plants in operation in both Norway and Germany, alongside over 350 other hydropower plants, including Rheidol, near Aberystwyth, in Wales.

Due to the demand for new energy installations, pumped-storage power stations have become a new investment hotspot in China's power industry. According to official data, ...

British Hydropower Association seeks clarity and clear timelines for new government scheme to encourage renewable energy storage. Detailed roadmap on "cap and floor" mechanism urgently required to boost investor ...

Mumbai: Welspun Group company Welspun New Energy has signed a Memorandum of Understanding (MoU) with the Maharashtra government to develop a 1.2 GW pumped hydroelectric storage project. As per a company release, the project, named "Dhamni Pumped Hydro project", would come with an investment of approximately Rs 5,000 crore. The ...

Between now and 2030, USD 127 billion - or almost one-quarter of global hydropower investment ... In addition to new pumped storage projects, an additional 3.3 TWh of storage capability is set to come from adding pumping ...

The 450MW project is being developed by ILI Group with Aecom contracted as the project engineer. Dubbed "Red John" the project near Dores will see electricity generated via pumped hydro storage. Pumped storage

turns ...

Mr Yousaf recently wrote to the Prime Minister urging him to take action so developers can have the certainty required to build a new generation of pumped storage hydro ...

A new guide aimed at reducing investment risks in pumped storage hydropower (PSH) projects was released today. The guide, titled "Enabling New Pumped Storage Hydropower: A guidance note for decision makers to de-risk ...

Ofgem has launched a new cap and floor investment support scheme, unlocking billions in funding to build major Long Duration Electricity Storage projects for the first time in ...

The research, by flexibility modelling expert Dr Goran Strbac and his colleagues, found that 4.5GW of new long duration pumped hydro storage, with 90GWh of storage could save up to £690m per year in energy system ...

New pumped hydro facilities would help cut down costly curtailment of wind power and other renewable energy assets at times when supply outstrips demand. Wind. UK takes "massive step forward" with new energy storage scheme. New pumped hydro facilities would help cut down costly curtailment of wind power and other renewable energy assets at ...

MEAFORD -- The Ontario government is advancing pre-development work for the proposed Ontario Pumped Storage Project, developed in partnership by TC Energy (TCE) and the Saugeen Ojibway Nation. The project, which would be the largest of its kind in Canada, would provide up to 1,000 megawatts of clean, affordable, and reliable electricity storage - enough to ...

The world's largest PSH project, the 3.6GW Fengning Pumped Storage Power Station in China's Hebei province, went online earlier this year. China is followed by Japan and the US, Saunders says, while Australia is ...

The International Forum on Pumped Storage Hydropower's Policy and Market Frameworks Working Group has released a new paper, "Pump it up: Recommendations for urgent investment in pumped storage hydropower to ...

Similarly, projects may not reach the critical stage of final investment decision if such uncertainty deters private investors," states the Enabling new pumped storage hydropower report. The report was developed ...

Scottish ministers approved the 1.5GW pumped storage facility in 2020. But power giant SSE wants assurances from the UK government before finally signing it off.

Some of the "new" pumped storage design units, Huanghe Institute, began to have design achievements. 3.2.3.

Analysis of approved power station cost. This paper analyzes the investment difference of power stations with the same installed capacity. The unit kilowatt cost index is related to a variety of indicators, and the installed capacity ...

Scottish Renewables, the voice of the renewable energy industry in Scotland, is calling on the UK Government to urgently deliver the measures it has promised to enable investment in large-scale, long duration energy ...

An artist's impression of Coire Glas, south west of Laggan Locks near Loch Lochy, Highland. A new study by independent researchers from Imperial College London has found that just 4.5GW of new long duration pumped hydro storage with 90GWh of storage could save up to £690m per year in energy system costs by 2050, as the UK transitions to a net-zero carbon emission ...

Renewable power developer Drax proposes building a new £500m pumped hydro storage plant at its existing Cruachan facility near Oban. The company said the extension could be operational in 2030 ...

The UK Taxonomy must ensure that hydropower investment criteria is aligned with well-established global criteria, ... A recent study by Imperial College found that just 4.5 GW of new long-duration pumped ...

? The paper discusses and lends recommendations pertaining to how pumped storage hydropower can galvanise investment in order to fulfill its necessary role in the clean energy transition. Additionally, the Forum has ...

The most significant investment in new pumped-storage hydropower capacity is currently being undertaken in China: Since 2015, the vast majority of final investment decisions for new capacity have been take there, with additions far exceeding those in other regions. Recommendations

A real options model for wind power investment with pumped storage. This section is divided into three sections, where first the pumped-storage wind-hydro plant technology is described in more detail, then the mathematical model is presented and finally the data are described. ... This represents the assumption that the new investment in the ...

Retirement of coal-fired power stations and continued investment in renewables are likely to cement a market in which variability in power generation and volatile energy prices are the norm. ... A number of other sites ...
