What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

How does battery energy storage work?

Are battery storage systems a primary electricity source?

Battery storage systems are not a primary electricity source, meaning the technology does not create electricity from a fuel or natural resource. Instead, batteries store electricity that has already been created from an electricity generator or the electric power grid, which makes energy storage systems secondary sources of electricity.

Who uses battery storage?
