What is a battery energy storage system?

A battery energy storage system (BESS) is an electrochemical device that charges from the grid or a power plant and then discharges that energy to provide electricity or other grid services when needed.

How do batteries store energy?

Batteries store energy through electrochemical processes. When a battery energy storage system is charged, electrical energy is converted into chemical energy within the battery cells. During discharge, the chemical energy is converted back into electricity to power devices or supply the grid.

When can energy be stored in batteries?
