

Can a new energy storage facility be built in Israel?

(Sue Surkes/Times of Israel) An Israeli company that has developed a unique method of storing renewable energy using air and water announced Wednesday that it has signed an \$8 million agreement in principle with the Israel Electricity Corporation to build the first facility of its kind in the world, in Dimona, southern Israel.

What is the supply voltage in Israel?

In Israel the supply voltage is 230V. If the appliance is a single voltage rated appliance, it will need to operate at the same voltage as the supply voltage of the country i.e. 230V. If this is not the case it should be used alongside a voltage transformer or converter to allow the appliance to work safely and properly.

Do I need a voltage adapter in Israel?

You will not need any sort of voltage adapter (they are always big, heavy and they can't handle too much energy. i.e. might have problems with hairdryers). You can plug your devices to the electric network grid in Israel without requiring a voltage adapter. Sorry, none of the plugs used in both countries are common.

The storage pit is usually waterproof and insulated at the sidewalls and on the top (Fig. 8). Insulation is also provided at the bottom of the storage, depending on its shape and size. The storage medium is usually a gravel and water mixture, although it can also be sand and water or soil and water.
