

What type of energy is used in Estonia?

Renewable energy here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal energy. Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important energy source in lower-income settings. Estonia: How much of the country's energy comes from nuclear power?

Does Estonia still use fossil fuels?

Energy in Estonia has heavily depended on fossil fuels. Finland and Estonia are two of the last countries in the world still burning peat. Estonia has set a target of 100% of electricity production from renewable sources by 2030 and climate neutrality by 2050.

What percentage of Estonia's energy supply is renewable?

According to the International Renewable Energy Agency (IRENA), in 2020, renewable energy accounted for 32% of Estonia's Total Energy Supply (TES). The composition of this renewable energy mix was heavily dominated by bioenergy, which represented 93% of renewables.

Are Finland and Estonia still burning peat?

Finland and Estonia are two of the last countries in the world still burning peat. Estonia has set a target of 100% of electricity production from renewable sources by 2030 and climate neutrality by 2050.

Why did Estonia stop relying on Russian energy sources in 2022?

In response to geopolitical tensions, Estonia reduced its reliance on Russian energy sources by halting imports of Russian pipeline gas in April 2022 and banning all Russian natural gas and oil product imports, including LNG, by September 2022.

How has oil shale changed Estonia's energy supply?

Between 2011 and 2021, the share of oil shale dropped from 71% to 60% in total energy supply and from 85% to 48% in electricity generation, rebounding to 57% in 2022. This reduction improved Estonia's carbon intensity, dropping it from the 3rd highest in the IEA in 2017 to the 18th highest in 2022.

KEDS is making a significant investment, effectively doubling the capacities of the distribution network.
