The CM60 is a core member of the sixth generation control system known as WTC6, developed by KK Wind Solutions. It is typically used as main controller in wind turbine control systems, but can be used for other applications as well. The controller is designed to tolerate the high levels of vibration and EMC disturbances in a wind turbine.

We have the capabilities to support customers at all stages in the development of hardware and software solutions, either through development consultancy from our experts, a joint product development effort or KK Wind Solutions handling the entire process based on ...
