What is a low-cost earth-abundant Na-ion storage (lens)?

In late 2024, the U.S. Department of Energy (DOE) awarded \$50 million over the next five years to establish the Low-cost Earth-abundant Na-ion Storage (LENS) consortium. The LENS Consortium, funded by the DOE Vehicle Technologies Office, aims to discover, develop, and demonstrate a new class of sodium-ion batteries (NIBs).

Why do we need a large-scale development of electrochemical energy storage?

Additionally, with the large-scale development of electrochemical energy storage, all economies should prioritize the development of technologies such as recycling of end-of-life batteries, similar to Europe. Improper handling of almost all types of batteries can pose threats to the environment and public health.

Why do energy storage projects need a standardised regulatory framework?

The absence of standardised regulatory frameworks and, in some cases, national or international technical standards for energy storage can introduce uncertainty and delays in project development. Clearly identifying the basis of design and any national or international standards invoked at an early stage in project development is advisable.

What is the lens consortium?

The LENS Consortium, funded by the DOE Vehicle Technologies Office, aims to discover, develop, and demonstrate a new class of sodium-ion batteries (NIBs). These NIBs will be designed to match or surpass the specific energy and energy density of current graphite/lithium iron phosphate (LFP) batteries, while also having a long life and low cost.

Who is lens?

LENS has assembled a world-class team from the following national laboratories and universities: This team of six national labs and eight universities, including four minority serving institutions (MSIs), collectively possesses decades of experience studying and developing novel materials for sodium-ion batteries (NIBs).

Why should we study energy storage technology?

It enhances our understanding, from a macro perspective, of the development and evolution patterns of different specific energy storage technologies, predicts potential technological breakthroughs and innovations in the future, and provides more comprehensive and detailed basis for stakeholders in their technological innovation strategies.

Places like SEGS in the Mojave Desert use this technology to concentrate solar power. There are different setups, including solar power towers and compact Fresnel reflectors. These show the strength and flexibility of the ...

increasingly understood, the determinants of project value are not. Siemens Energy Business Advisory's experience serving energy suppliers, consumers, and investors across the country evaluating battery storage projects suggests project value depends largely on quantifying how operators can optimize the flexible operational characteristics of

BESS Technology. Battery Energy Storage Systems offers more than just a standard battery. It is fully packed with technologies allowing its system to capture charge and execute discharge. The following are the typical ...

The U.S. Department of Energy (DOE) has awarded \$50 million over the next five years to establish the Low-cost Earth-abundant Na-ion Storage (LENS) Consortium. Led by DOE's Argonne National Laboratory, the ...

Presentation by Bushveld Energy at the African Solar Energy Forum in Accra, Ghana on 16 October 2019. The presentation covers four topics: 1) Overview of energy storage uses and technologies, including their current ...

The large-scale development of energy storage began around 2000. From 2000 to 2010, energy storage technology was developed in the laboratory. Electrochemical energy storage is the focus of research in this period. From 2011 to 2015, energy storage technology gradually matured and entered the demonstration application stage.

Introduction to energy storage technologies 18. ... Many energy storage technologies are being developed that can store energy when excess renewable power is available and discharge the stored energy to meet power demand when renewable generation drops off, assisting or even displacing conventional fossil- or nuclear-fueled power plants ...

Here, we examine the obstacles that arise in the planning, design and construction of battery energy storage systems and share ten recommendations that developers can action based on our own experience supporting clients to ...
