Lithium battery for energy storage on the power consumption side

Existing literature reviews of energy storage point to various topics, such as technologies, projects, regulations, cost-benefit assessment, etc. [2, 3]. The operating principles and performance characteristics of different energy storage technologies are the common topics that most of the literature covered.

To ensure grid reliability, energy storage system (ESS) integration with the grid is essential. Due to continuous variations in electricity consumption, a peak-to-valley fluctuation between day and night, frequency and voltage regulations, variation in demand and supply and high PV penetration may cause grid instability [2] cause of that, peak shaving and load ...

The peak shaving strategy consists in shifting the load from hours of high demand to hours with lower demand [7].For instance, Zheng et al. [8] investigated different storage technologies to perform peak shaving in residential buildings and showed that, given the expected price reduction and improved efficiency for batteries toward 2050, the use of private battery ...
