

Why is bridge data centres expanding in Malaysia?

Eric Fan, president Bridge Data Centres, said, "Our ongoing expansion in Malaysia underscores our commitment to meeting the evolving needs of our customers and further solidifying our position as a key player in the data centre industry."

Who is responsible for electricity generation in Malaysia?

In Malaysia, electricity capacity is shared between independent power producers (IPPs) and the power generation arm of Tenaga Nasional Berhad (TNB), Malaysia's largest electric utility company. Besides generation, TNB is also responsible for the transmission and distribution of electricity.

What is Malaysia's energy supply?

Although the use of biofuels is increasing rapidly, hydropower continues to make the largest contribution to renewables in the country, with a total supply of 93 PJ in 2020. Malaysia's energy supply is still heavily dominated by fossil fuels. Source: ST, 2021a.

What is Malaysia's energy supply like in 2022?

Preliminary results also were presented at the 27th Conference of the Parties to the United Nations Framework Convention on Climate Change (COP 27) held in Sharm El-Sheikh, Egypt in November 2022. Malaysia's total primary energy supply grew by 2.9% in 2019, to reach a total of 4.1 exajoules (EJ) (Figure 8) (ST, 2020a, 2021a).

What are the key renewables in Malaysia?

To date, the key renewables in the power sector have been hydropower (6 GW of installed capacity as of 2021) and solar PV (1.8 GW). The untapped hydropower potential is concentrated mainly in Sarawak and is distant from the key national load centres on Peninsular Malaysia, where much of the potential has already been developed.

How did Malaysia's energy supply grow in 2019?

Malaysia's total primary energy supply grew by 2.9% in 2019, to reach a total of 4.1 exajoules (EJ) (Figure 8) (ST, 2020a, 2021a). All fuels recorded an increase except for coal, which showed a negative growth of 5.5% due to lower imports of coal.
