The NASA InSight mission successfully landed on Mars on November 26, 2018 and its dual solar panel array has set a daily electricity generation record for the planet. The 4,588 watt-hours InSight generated on its first sol, or Martian day, from solar power is well over the 2,806 watt-hours generated in a day by NASA's Curiosity rover, which ...

The Sept. 10 event is the largest solar event at Mars observed by MAVEN to date, and the event and its impact were observed by multiple spacecraft.Â Solar events such as these may be a primary means of driving loss of the Martian atmosphere to space, so observing each substantial event and its effects on the upper-atmosphere system is important.Â In a series of ...

To allow for 300,000 photovoltaic solar panels in the western Bolivian town of Ancotanga, local inhabitants gave up land in exchange for promises of jobs and healthcare -- that they are still waiting to see.

As Mars orbits the Sun, it completes one rotation every 24.6 hours, which is very similar to one day on Earth (23.9 hours). Martian days are called sols - short for "solar day." A year on Mars lasts 669.6 sols, which is the same as 687 Earth days. Mars' axis of rotation is tilted 25 degrees with respect to the plane of its orbit around the Sun.

The selection of solar power for a Mars mission can impose constraints on mission landing and operating locations. For example, Golombek et. al. (2003) describes how the constraint for near-equatorial landing areas for the Mars Exploration Rovers (Spirit and Opportunity) was heavily influenced by the need to maximize solar power. Historically, NASA ...
