

Is Spain a good candidate for a microgrid?

In this sense, Spain is an outstanding candidate for the development and implementation of microgrids, as it is a world leader in the integration of variable renewable energy and has built a robust electricity system with high shares of wind and solar PV.

Can microgrids be used in the Spanish grid?

Microgrids allow diversification and grid penetration of renewable energies. Laws on energy transition should rise in parallel with the development of technology. Experimental projects have proved this technology has potential in the Spanish grid.

What is the Acciona Energa microgrid?

The microgrid designed by ACCIONA Energía for Schneider Electric in Puente la Reina is based on the "energy as a service" approach. This model facilitates cost saving, digitalization and flexibility without the need for the client to make any investment.

What type of load equipment is used in a microgrid?

The load equipment includes underground cables (approximately 15 km), overhead cables (approximately 450 m), electric vehicle charging station, as well as resistive (4000 kW), capacitive (6000 kVAr) and inductive loads (300 kVAr) [78].

Which energy storage system is most popular in Spain?

Although batteries are the most widespread energy storage systems, green hydrogen has a strong presence, showing up in a third of the Spanish smart grids. Traditional control strategies are being displaced by advanced ones such as MPC or fuzzy logic due to its higher efficiency.

A microgrid is a power grid that gathers distributed renewable energy sources and promotes local consumption of renewable energies [1].
