

Is market restructuring a threat to a microgrid?

Market restructuring, like that proposed in New York's "Reforming the Energy Vision (REV)" effort, will be required to move from a situation where microgrids are viewed as a threat to one in which distributed energy resource services are valued by the utility grid and fairly compensated .

Where can electrical utilities test microgrid concepts?

Electrical utilities have begun testing microgrid concepts in laboratory-type settings. One example is Duke Energy, which maintains two test microgrid facilities: one in Gaston County, North Carolina , and one in Charlotte, North Carolina .

What is a 'multi-agent system' in a microgrid?

Hierarchical control architectures that manage power within a microgrid and mediate exchanges with the main grid have been deployed using a "multi-agent system" approach in two European microgrids, one in the Greek island of Kythnos and another in the German 'Am Steinweg' project .

Who owns a microgrid?

According to Navigant Research , the majority of grid-tied microgrids today are owned and financed by facility owners, especially in the campus/institutional category. It is important to recognize that microgrids, especially community microgrids, can utilize the existing distribution system infrastructure, radically reducing their costs.

What is a residential microgrid?

One appealing residential microgrid application combines market-available grid-connected rooftop PV systems, electrical vehicle (EV) slow/medium chargers, and home or neighborhood energy storage system (ESS). During the day, the local ESS will be charged by the PV and during the night it will be discharged to the EV.

Will grid-tied microgrid customers stay connected if the grid fails?

Although grid-tied microgrid customers will likely stay connected to the grid for the foreseeable future, only islanding in the case of utility grid failure, self-consumption of microgrid generated energy could erode the revenue base that has traditionally paid for utility infrastructure investments.

The prospering Big data era is emerging in the power grid. Multiple world-wide studies are emphasizing the big data applications in the microgrid due to the huge amount of produced data. Big data analytics can impact the design and applications towards safer, better, more profitable, and effective power grid.
