

Do you need a backup gas generator for an off-grid Solar System?

off-grid systems must include a source of backup power. For most people, that means adding a backup gas generator to get through periods of low solar production. Before you size your off-grid solar system, consider whether you can take measures to reduce your energy usage.

Is a 10kW Solar System a waste?

If you're looking to go off the grid, a 10kW solar power system would likely be a waste unless you invest in a solar battery to capture the extra power produced during the day and make that power available when the sun's not shining. How much energy can a 10kW solar system produce?

Are PWM controllers good for off-grid homes?

PWM controllers are an older technology that we do not recommend for off-grid homes. They are less efficient and have limited options for compatible solar panels. PWM controllers are better suited for less intensive applications, like remote telecom setups.

Do I need a battery bank for an off-grid kit?

For reference, all of our off-grid kits above 2kW demand at least 415Ah of capacity from the battery bank. So the 250Ah figure we calculated above falls short of the inverter requirements; you'll need a 415Ah battery bank to be compatible with the inverter.
