Which rigs have energy storage systems for onshore drilling?

The energy storage system developed for onshore drilling is among the world's first ones. As a foreign analog, only the project of the German rig manufacturer Bentec implemented in Oman can be highlighted. In 2017, the container-type 0.9 MW Bentec ESS with a storage capacity of 0.3 MW was put into trial operation on the KCA Deuteg T-94 rig.

Does Maersk use ESS in oil & gas production?

In 2020, Maersk (Energy and delivers energy storage, 2021) implemented the world's third project of using an ESS in offshore oil and gas production on a Maersk Intrepid CJ70 jack-up drilling rig, also operating in the North Sea. The total capacity of the rig power unit is 11.6 MW.

Can an ESS be used in the oil and gas industry?

The first example of practical use of an ESS in the oil and gas industry was a joint project of Woodside Energy and ABB Ability (Baccino et al. 2018)--a PowerStore system with a rated capacity of 1 MW and a storage capacity of 1 MWh, installed at the Australian Goodwyn Alpha offshore platform in 2017.

By 2050, wind and solar are expected to represent more than 75% of grid connected power generation.* Energy storage systems can store energy during times of oversupply and use it when demand peaks or in periods with little or no renewable energy generation, ensuring a reliable and continuous supply of electricity.
