What happens when Ces users charge their cloud storage?

When a CES user charges its cloud storage, the energy storage facility charges by absorbing energy from the grid. When CES users discharge their cloud storage for their own use, the energy storage facility releases the energy to the grid to compensate for the corresponding load of the CES users.

What are the differences between user-side small energy storage and cloud energy storage?

The specific differences are as follows: User-side small energy storage participates in the optimization and scheduling of the cloud energy storage service platform, which can aggregate dispersed energy storage devices.
